

Cyclistic Executive Business Report

Executive Summary

This report analyzes 12 months of Cyclistic bike-share data to identify behavioral differences between annual members and casual riders. The analysis found that members primarily use bikes for commuting, while casual riders demonstrate more recreational riding behavior. These findings reveal strong opportunities for targeted marketing campaigns aimed at increasing annual memberships.

Key Findings

- Members show strong weekday and rush-hour commuting behavior.
- Casual riders take longer trips and ride more frequently on weekends.
- Casual rider activity increases significantly during warmer months.
- Round-trip rides are more common among casual riders, suggesting recreational usage patterns.

Business Recommendations

- Launch weekend-focused membership campaigns.
- Target commuter-like casual riders with membership discounts.
- Increase marketing during summer months when casual demand peaks.
- Use high-traffic stations for localized promotions.

Analysis Area	Main Insight
Ride Duration	Casual riders take longer trips
Weekday Usage	Members dominate weekday riding
Weekend Usage	Casual riders dominate weekends
Rush Hours	Members show commuting patterns
Seasonality	Casual usage peaks during summer

Conclusion

The analysis identified clear behavioral differences between annual members and casual riders. Members primarily use Cyclistic bikes for transportation and commuting, while casual riders use bikes more for recreation and leisure. These insights provide actionable opportunities for Cyclistic to improve annual membership conversion through targeted marketing strategies.
